In the Abstract

Please replace the original abstract with the following abstract:

ABSTRACT

A modular materials characterization apparatus includes a sensor array disposed on a substrate, with a standardized array and contact pad format; electronic test and measurement apparatus for sending electrical signals to and receiving electrical signals from the sensor array; an apparatus for making electrical contact to the sensors in the standardized array format; and an apparatus for routing signals between one or more selected sensors and the electronic test and measurement apparatus. The sensor array is preferably arranged in a standardized format used in combinatorial

chemistry applications for rapid deposition of sample materials on the sensor array. The interconnection apparatus and sensor array and contact pad allow measurement of many different material properties by using substrates carrying different sensor types, with only minor modifications if any to the electronic test and measurement apparatus and test procedures.
